AegisMCP -- 3-Minute Video Demo Script (Smooth & Conversational)

Track 2: Household Crisis & Scam Assistant via MCP | Simple, natural spoken English for smooth presentation

Duration	**3 Minutes** (180 seconds)	**Speaking Style**	Simple, conversational, friendly and clear
Screen Setup	localhost:8080 (1080p, 100% zoom)	**Key Click Actions**	Emergency Trigger -> Scam Verify -> Claim Packet

Part 1: The Problem & What AegisMCP Does — 0:00 -- 0:30

What To Show On Screen	What To Say (Smooth Spoken Script)
[0:00 -- 0:15] *Show localhost:8080 on screen. Point cursor at the title and the green 'MCP LIVE' badge at the top right.*	"Hi everyone! When a real crisis happens at home -- like a broken water heater flooding your basement, or a scammer on the phone tricking an elderly parent -- regular voice assistants can't really help. They just read out generic search results while the damage keeps getting worse."
[0:15 -- 0:30] *Scroll across the 11 emergency buttons (Water Heater, Gas Leak, Electrical Surge, Fire, etc.).*	"That's why we built AegisMCP: a smart crisis assistant and scam firewall for Alexa+. Powered by the Model Context Protocol, Aegis doesn't just talk -- it takes action. It protects life safety, shuts off dangerous valves, checks your insurance policy, and alerts your family."

Part 2: Live Emergency & Insurance Check — 0:30 -- 1:15

What To Show On Screen	What To Say (Smooth Spoken Script)
[0:30 -- 0:45] *Select 'Water Heater'. Click 'Speak Voice Command'. Show the question in the text box.*	"Let's see it in action. I can simply click the mic and speak naturally: 'Alexa, my water heater just burst and water is flooding the basement! Should I try to unscrew the valve myself?' Now, I click Trigger Response."
[0:45 -- 1:00] *Click blue button 'Trigger Alexa+ Emergency Response'. Point to the green checkmarks and safety instructions.*	"Look at what happens in seconds: First, safety: Alexa warns the user to stay away from the water to avoid electric shock. Second, containment: it automatically sends a command to shut the main water valve to stop the flooding. It can even control real smart home valves through Home Assistant."
[1:00 -- 1:15] *Scroll to show the Policy RAG box ($500 deductible) and the Caregiver Alert box.*	"Third, it reads our actual home insurance policy. It finds the exact clause, quotes our 500-dollar deductible, and gives a crucial warning: 'Do not take apart the heater yourself, or you will void your warranty.' At the same time, it sends an emergency SMS to a family caregiver."

Part 3: Scam Firewall & Phone Number Inspection — 1:15 -- 2:00

What To Show On Screen	What To Say (Smooth Spoken Script)
[1:15 -- 1:30] *Click 'Scam Firewall' tab. Show the Chase bank impersonation text demanding gift cards.*	"Now let's check out the Scam Firewall. Here is a common phone scam: a caller claims to be from Chase Bank, threatening that your account is frozen unless you buy Apple gift cards right now."
[1:30 -- 1:45] *Click 'Alexa, verify this caller with Aegis'. Watch the threat gauge spike to 99% red.*	"I click 'Verify Caller'. Instantly, Aegis analyzes the conversation. The threat gauge shoots up to 99% -- Critical Scam! Alexa speaks up with an urgent warning: 'Hang up right now. Banks will never ask for gift cards or secret codes.'"
[1:45 -- 2:00] *Highlight the Carrier Intelligence box (VoIP detected) and the Caregiver Alert.*	"Even better, Aegis inspects the caller's phone number. It detects that the call is coming from an untrusted internet VoIP burner line -- not a real bank. And once again, it instantly sends an alert to the family caregiver so no one gets tricked."

Part 4: One-Click Insurance Claim Dossier — 2:00 -- 2:30

What To Show On Screen	What To Say (Smooth Spoken Script)
[2:00 -- 2:15] *Click 'Claim Packet' tab. Click 'Compile Forensic Claim Packet'. Blue SHA-256 box appears.*	"After an emergency, dealing with insurance paperwork is a nightmare. With Aegis, you just click 'Compile Forensic Claim Packet'. In one second, it generates a complete insurance claim report."
[2:15 -- 2:30] *Open the generated PDF from out/ folder to show the table and footer.*	"It pulls together sensor logs, timestamps, valve shutoff times, and photos into a clean PDF document for the insurance adjuster. To prove the data is real and hasn't been altered, Aegis gives it a unique digital security fingerprint using SHA-256."

Part 5: Under the Hood & Wrap-up — 2:30 -- 3:00

What To Show On Screen	What To Say (Smooth Spoken Script)
[2:30 -- 2:45] *Click 'Wire Log' tab on the right. Show the real HTTP POST /mcp entries with 200 OK.*	"Finally, look at the Wire Log tab on the right. Everything you just saw runs on the official 2025-11-25 Streamable HTTP MCP standard. Our frontend and server talk purely through secure JSON-RPC over the wire, protected against malicious web attacks."
[2:45 -- 3:00] *Click 'Real vs Simulated' tab. Conclude with a warm smile and thank the judges.*	"We also open-sourced our crisis security kit on GitHub so any developer can use it. AegisMCP turns smart homes into proactive guardians when every second counts. Thank you!"

Presentation Tip: *Speak naturally just like talking to a friend. Pause for 1 second after each click so the viewer can see the UI change before you explain it.*
