AegisMCP -- 3-Minute Video Demo Script & Storyboard

Track 2: Household Crisis & Scam Assistant via MCP (Streamable HTTP 2025-11-25) | Amazon Developer Hackathon

Target Duration	**3:00 Minutes** (180 seconds exact)	**Speaker Pace**	~140 words per minute (brisk, confident)
Display Resolution	1080p (1920x1080), 100% or 110% zoom	**Prerequisites**	localhost:8080 (Host) & 127.0.0.1:8000 (FastMCP)

Segment 1: The Hook & Architectural Overview — 0:00 -- 0:30

Timing & Visual Action (On-Screen)	Spoken Narration (Voiceover Script)
[0:00 -- 0:12] *Fullscreen view of Alexa+ Multimodal Console (localhost:8080). Cursor highlights green 'MCP LIVE' and orange 'DEVICES SIMULATED' status pills.*	"When a high-stakes emergency strikes at home -- a water heater rupturing next to electrical panels, or a predatory scammer coercing an elderly parent over the phone -- standard smart assistants fall short. They recite generic web search blurbs while disaster unfolds."
[0:12 -- 0:30] *Show FastMCP /healthz endpoint returning spec '2025-11-25'. Pan over Dual-Agent architecture diagram (Analyst vs Responder).*	"Meet AegisMCP: an autonomous household crisis assistant and scam firewall for Alexa+. Built on the official 2025-11-25 Streamable HTTP MCP specification, it connects Alexa to a secure local MCP server that arbitrates crises across 11 home categories, acts on smart hardware, parses insurance policies, and protects families."

Segment 2: Household Emergency & Semantic Policy RAG — 0:30 -- 1:15

Timing & Visual Action (On-Screen)	Spoken Narration (Voiceover Script)
[0:30 -- 0:45] *Select 'Water Heater' scenario. Click microphone button 'Speak Voice Command'. Web Speech API displays continuous speech input.*	"Let's test an urgent scenario using browser-native live voice capture via the Web Speech API. A resident frantically asks Alexa if they should unbolt their leaking water heater."
[0:45 -- 1:00] *Click 'Trigger Alexa+ Emergency Response'. Progress bar completes. IoT containment card renders with checkmarks.*	"Instantly, AegisMCP calls arbitrate_home_emergency. Notice what happens in parallel: 1) Life Safety: Alexa immediately warns the user away from standing water near electrical circuits. 2) Reversible Containment: It auto-closes the main water shutoff valve. 3) Hardware Bridge: It dispatches real Matter/Zigbee commands to Home Assistant."
[1:00 -- 1:15] *Scroll down to highlight Semantic Policy RAG card (Section 4.2.b) and the Caregiver Emergency Alert card.*	"Crucially, our Semantic Policy RAG retrieves Section 4.2.b of the standard HO-3 homeowner policy: quoting their exact $500 deductible, issuing a critical warranty alert -- warning that DIY disassembly voids manufacturer coverage -- and dispatching a priority caregiver SMS alert to family members."

Segment 3: Scam Firewall & Carrier-Grade Intelligence — 1:15 -- 2:00

Timing & Visual Action (On-Screen)	Spoken Narration (Voiceover Script)
[1:15 -- 1:30] *Switch to 'Scam Firewall' tab. Display Chase bank impersonation transcript demanding wire transfer and Apple gift cards.*	"Next, let's watch Aegis protect vulnerable residents from predatory social-engineering calls. Here, a caller claims to be Chase Fraud Department, demanding immediate gift card purchases and wire transfers."
[1:30 -- 1:45] *Click 'Alexa, verify this caller with Aegis'. Threat gauge shoots to 99% (Critical Scam). Highlight Alexa spoken interjection.*	"Within milliseconds, Aegis triggers analyze_live_scam_call. Alexa generates an urgent spoken interjection: warning the resident to hang up immediately and reminding them that financial institutions never demand gift cards or verification codes."
[1:45 -- 2:00] *Highlight the Carrier-Grade Line Intelligence card (VoIP detected, NPA-NXX area code) and Caregiver Notification status.*	"Under the hood, our Carrier Intelligence engine inspects the NPA-NXX area code, detects that the call originates from a non-geographic virtual VoIP burner line rather than an official bank exchange, and automatically dispatches an emergency warning SMS to the resident's caregiver."

Segment 4: Tamper-Evident Forensic Claim Dossier — 2:00 -- 2:35

Timing & Visual Action (On-Screen)	Spoken Narration (Voiceover Script)
[2:00 -- 2:18] *Click 'Claim Packet' tab. Click 'Compile Forensic Claim Packet'. Blue SHA-256 fingerprint box and ledger path appear.*	"Once the crisis is contained, homeowners face another nightmare: fighting insurance claims. In one click, Aegis compiles an insurance-ready forensic claim dossier."
[2:18 -- 2:35] *Open compiled claim PDF (out/claim_CLM-xxxx.pdf). Show timestamped sensor curve and SHA-256 cryptographic digest in header/footer.*	"Every sensor reading, breaker trip, and timestamped valve actuation is compiled into a formal PDF report. To prevent post-incident spoliation, Aegis cryptographically hashes the packet with SHA-256, commits it to an immutable local audit ledger, and embeds the cryptographic fingerprint in the PDF header for adjusters."

Segment 5: MCP Streamable HTTP Wire & Open Source — 2:35 -- 3:00

Timing & Visual Action (On-Screen)	Spoken Narration (Voiceover Script)
[2:35 -- 2:48] *Click 'Wire Log' tab on the right panel. Show live POST /mcp transactions with 200 OK and Mcp-Session-Id tracking.*	"Everything you just saw is driven purely over the official 2025-11-25 Streamable HTTP MCP wire on /mcp. Our host backend has zero direct imports from the server -- it acts as a pure MCP client communicating via JSON-RPC, protected by custom OriginGuard middleware that blocks DNS-rebinding attacks with HTTP 403."
[2:48 -- 3:00] *Click 'Real vs Simulated' tab. Show mcp-streamable-crisis-kit package directory in VS Code / explorer.*	"For the Open Source Mini Challenge, we extracted mcp-streamable-crisis-kit, providing turnkey OriginGuard and memory wire logging for any developer. AegisMCP: turning smart homes into proactive guardians when every second counts. Thank you!"

Production Recording Tips: *Record at 1080p (1920x1080) at 100% zoom. Keep out/ open in a file viewer to show the PDF in 1 click. Maintain steady brisk pacing (~140 wpm).*
